

# Create Your Own Emergency Action Timeline

An emergency action timeline is a representation of what actions you should take when faced with typhoons, heavy rain, or other natural disasters. Research the level of risk of your surroundings and confirm where your nearest shelter is, when to evacuate and what you need to take with you.

## Let's consider a decentralized evacuation

- Since a large number of people may gather at an evacuation center during a disaster, please consider the following points.
- (1) Consider establishing a safe place other than a shelter, such as a relative's or a friend's home.
  - (2) If you are safe at home, consider sheltering in place at home (e.g., vertical evacuation to the second floor).

## Family Emergency Action Timeline

Disaster outbreak

### Weather and evacuation information

<Alert level 1>  
Early warning information  
Weather information

<Alert level 2>  
Heavy rain and flood advisory  
Weather information

- Heavy rain and flood warning
- Information to provide warnings on flooding, etc.

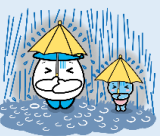

<Alert level 3>  
Evacuation of the elderly, etc.

Official city evacuation announcement information

- Landslide alert information
- Information on flood hazards, etc.

<Alert level 4>  
Evacuation instructions

Official city evacuation announcement information

- Heavy rain emergency warning
- Information on flooding, etc.

<Alert level 5>  
Emergency safety measures

Official city evacuation announcement information

### Evacuation preparations and confirmation

#### ● Review hazard maps

Risk of flood ☐ Yes ☐ No

River flood depth : \_\_\_\_\_ m

Urban flood depth : \_\_\_\_\_ m

Risk of landslide ☐ Yes ☐ No

Risk of tsunami or storm surge ☐ Yes ☐ No

#### ● Confirm evacuation shelter

Confirm evacuation shelter location and required travel time. (No need to fill this out if your home is safe and evacuation is not necessary.)

Evacuation shelter : \_\_\_\_\_

Necessary travel time : \_\_\_\_\_

#### ● Evacuation timing

- ☐ The elderly, people with disabilities, people with young infants, etc., who require more time to evacuate:

Evacuate at <Alert level 3>

- ☐ Those who do not belong to the above groups (prepare to evacuate at alert level 3):

Evacuate at <Alert level 4>

- If you have not already evacuated then please do so immediately.
- If it is unsafe to evacuate outside, secure your own safety inside the building.

### Evacuation important points

#### ● Preparation list

- ☐ Confirm the weather on TV, etc.
- ☐ Confirm evacuation shelter location and course of travel
- ☐ Confirmation of emergency supplies
- ☐ Prepare medicine for any chronic illnesses
- ☐ Charge mobile phone

#### ● Evacuation checklist

- ☐ Confirm whether the evacuation shelter is open or not
- ☐ Ensure that all doors/windows are locked and reduce any potential fire hazards when evacuating your home
- ☐ Take your emergency evacuation bag with you
- ☐ Wear comfortable shoes and clothing that offer a good range of movement when evacuating

#### ● Method of receiving evacuation information

- ☐ Hakusan City email
- ☐ Disaster prevention radio communications
- ☐ Hakusan City Home Page
- ☐ Hakusan City Official LINE

# Types of Evacuation Sites

◆ **Primary Evacuation Site:** A location designated by a neighborhood association.

This is a gathering place (such as a community center or park) designated by each neighborhood association to confirm safety, count evacuees, and assess damage during a disaster.

Since primary evacuation sites are designated by neighborhood associations, they may be subject to change based on the association's decisions.

◆ **Secondary Evacuation Facility:** An evacuation facility designated by the city. (designated evacuation shelter)

This facility is for disaster victims whose homes are damaged and uninhabitable, allowing them to evacuate for a relatively long period of time.

Within the city, community centers, schools, gymnasiums, and similar facilities are designated as such.

◆ **Designated Emergency Evacuation Site:** An evacuation site designated by the city

Tsunami / Storm Surge	River Flooding / Urban Flooding	Debris Flow	Landslide / Landslides on Sloped Areas

Hakusan Tedorigawa Geopark  
Mascots  
Yuki Mama & Shizuku-chan

This is an evacuation site for quickly escaping danger in the event a disaster occurs or is likely to occur.

There are cases where evacuation sites differ depending on the type of disaster, such as tsunamis, floods, or landslides, so please be aware when choosing where to evacuate.

◆ **Voluntary Evacuation Shelter:** An evacuation shelter designated by the city.

This is an evacuation shelter opened in advance when the approach of a typhoon or a forecast of prolonged heavy rain is expected to impact the city.

There are community centers or similar facilities designated as such in each district.

\*Notice of the opening of evacuation shelters will be provided via the government emergency radio system for disaster prevention and relief, Hakusan City email, the city's website, and other means. Please be sure to check if the shelter is open before evacuating.
